

Date & Time

Position: My computer→ctrlpanel→System→Date & Time

This item can be used to set date and time of system, and configure zones that used by system.

Adjust date and time

- **Set date**

The left section of the interface is date setup section. Click single arrow to change the month, or click double arrow to change the year. After month and year are selected, the calendar of this month will be displayed at bottom; when you click a date in the calendar, this date will be set as system current date.

- **Set time**

The right section of the interface is time setup section where three textboxes represent hour, minute, second respectively. You can adjust time either by using up or down arrow, or directly inputting hour, minute and second in the textbox. If you want to get an accurate time, please check “update time automatically from Internet time server”.

- **Current time zone**

Select appropriate time zone from time zone selection list when configuring system time zone.

After change is made, click “**Apply**” or “**OK**” button to activate the new setup.

Click clock button on the panel, the following calendar window will appear, you can examine year and date here. Click single arrowhead to change month and twin arrowhead to change year.

June 2006						
Mon	Tue	Wed	Thu	Fri	Sat	Sun
29	30	31	1	2	3	4
