

VNC long-distance installation mode

The newest Asianux add the mode that can carry out long-distance installation through VNC, this way, the administrator can control the installation progress from long distance.

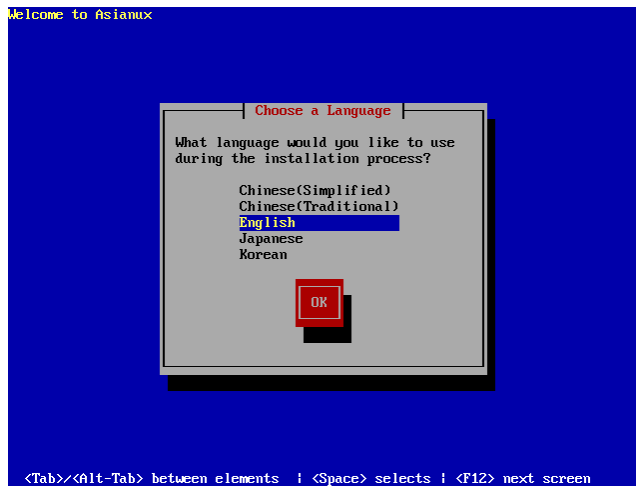

First, After booting successfully, type in the following command: `linux vnc` at the installation boot prompt *boot:* to start up vnc installation process.

Add `vncpassword` parameter if you want to set password, the format is as follows:

```
boot: linux vnc vncpassword=redflag
```

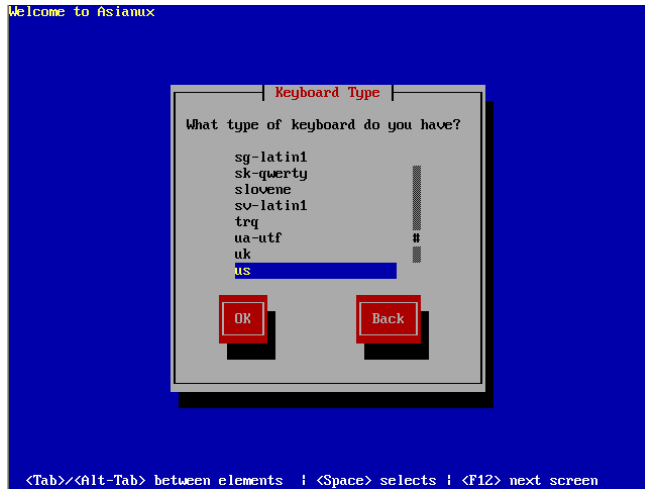

Installation program will start up like normal installation.

It will enter “choose language” interface first, let user input the appropriate language here.

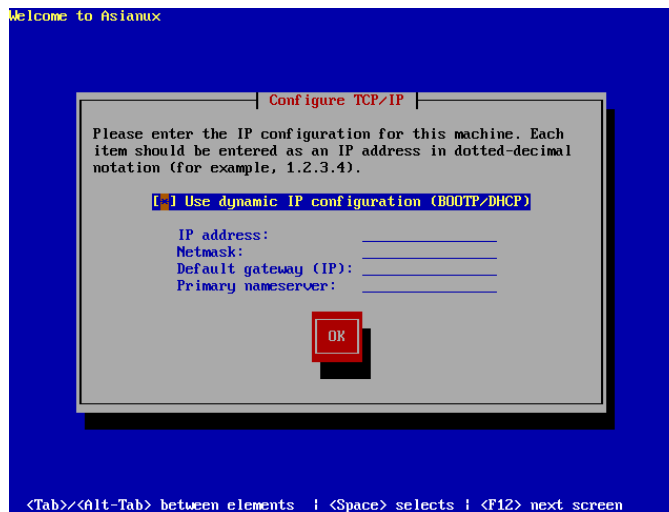

Choose language

Let user select appropriate keyboard in this step, to most users, use the defaulted “us” language keyboard.

Choose keyboard

Setting network--long-distance needs user to configure network in order to connect more conveniently, please set the network and press "OK".

Set network

Installation program will start up after setting, and the relevant information will show on the screen.

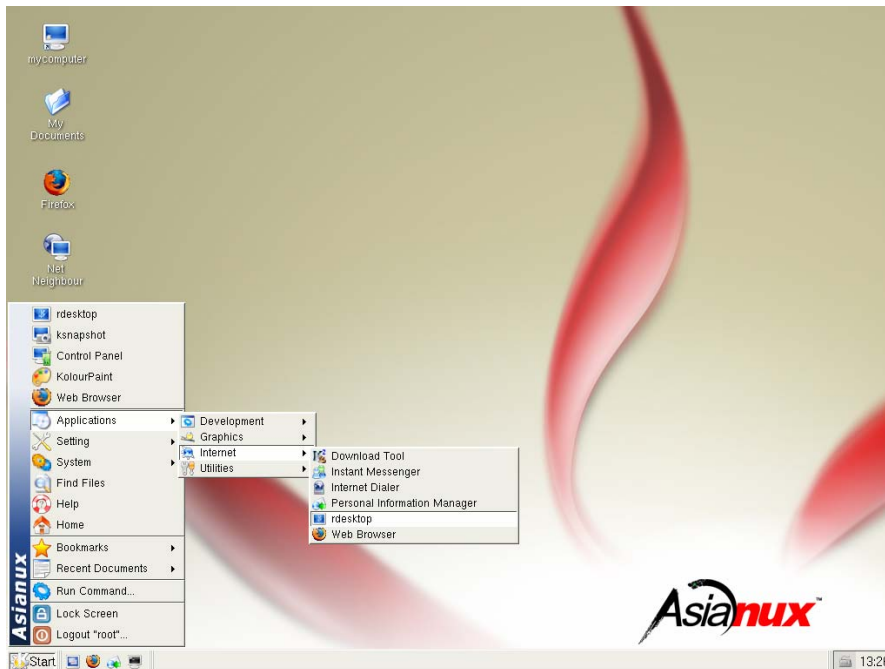

```
Running anaconda, the Asianux system installer - please wait...
Probing for video card:  UMdare
Probing for monitor type:  Unknown monitor
Probing for mouse type:  Generic - 3 Button Mouse (PS/2)
Starting UNC...

WARNING!!! UNC server running with NO PASSWORD!
You can use the vncpassword=<password> boot option
if you would like to secure the server.

The UNC server is now running.
Please connect to 10.1.0.211:1 to begin the install...
Starting graphical installation...
XKB extension not present on :1
```

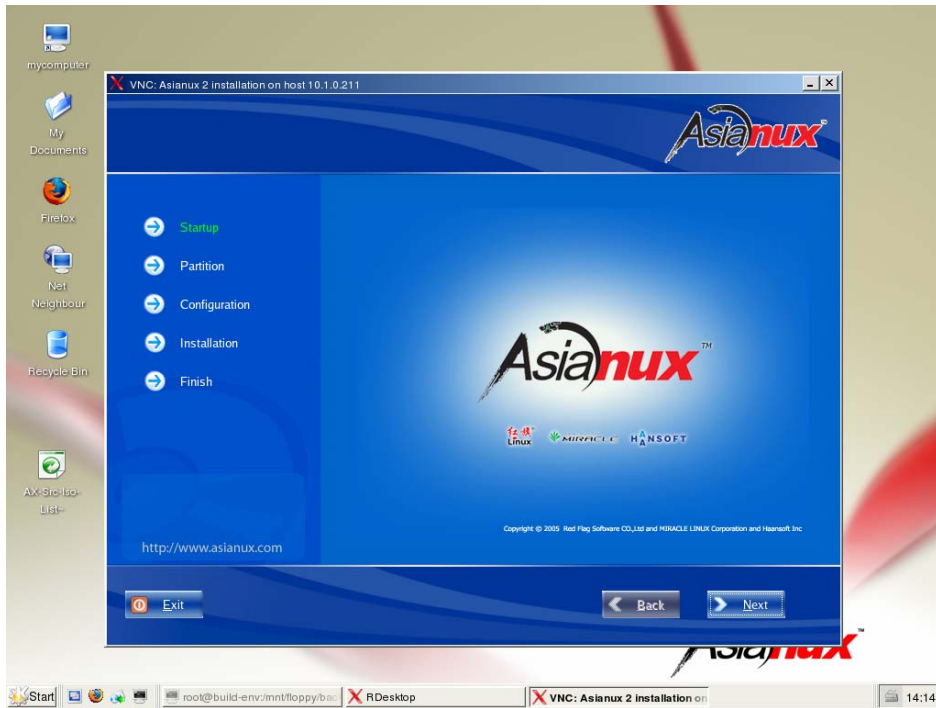

Start up the installation program

Now you can just connect installation server from other client computer by using the relevant VNC client software. Such as the tool: “long-distance desktop connection” that brings in Asianux Server system.

“long-distance desktop connection” tool in Asianux

After connecting successfully, the following interface will appear:

Long-distance VNC installation progress

The hinder installation mode has no different with ordinary installation.

About the detailed using method of long-distance desktop connection, please refer to User's guide.

If you want to carry out long-distance installation on Windows or other platform, please visit the following web site to get the client port:
